Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rieder (5,597,356) in view of Heckethorn (3,227,497).

Rieder discloses a sealing ring comprising a body, reinforcement ring 6 embedded in the body (at 17), first leg with a free end 19, and a second leg with a free end 18. The first leg is longer than the second leg. Rieder does not disclose that the free ends of the legs have first and second sealing contours. Heckethorn teaches a sealing ring having a body and leg. Heckethorn teaches forming the free end of the leg with first and second sealing contours 70 and 75 to provide improved sealing against leakage and removal of dirt and particles (see col. 2, lines 6-13). The contour can be an edge (see 70) or rounded (see 75 in Figure 7). The contours form a recess. Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the legs of Rieder with the contours taught by Heckethorn to improve sealing against leakage and removal of dirt and particles.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. For example, Nieman and Schultenkamper can be modified with Heckethorn, too.
